

Baggage Jam Data Documentation

▼ Game Data

Assets\BaggageJam_Files\Data

- **Total Money:** Determines the total money in the game. You can change the total money from here.
 - **Level Count:** Enter the level number you want to start. Then, open the corresponding scene and start the game.
- ▶ Change Conveyor Speed
- **Reset Data:** If you want to reset the Game Data, press the “**Reset Data**” button to reset all values.
 - **Full Source:** It will suddenly increase the money to 10000.

▼ Jokers Data

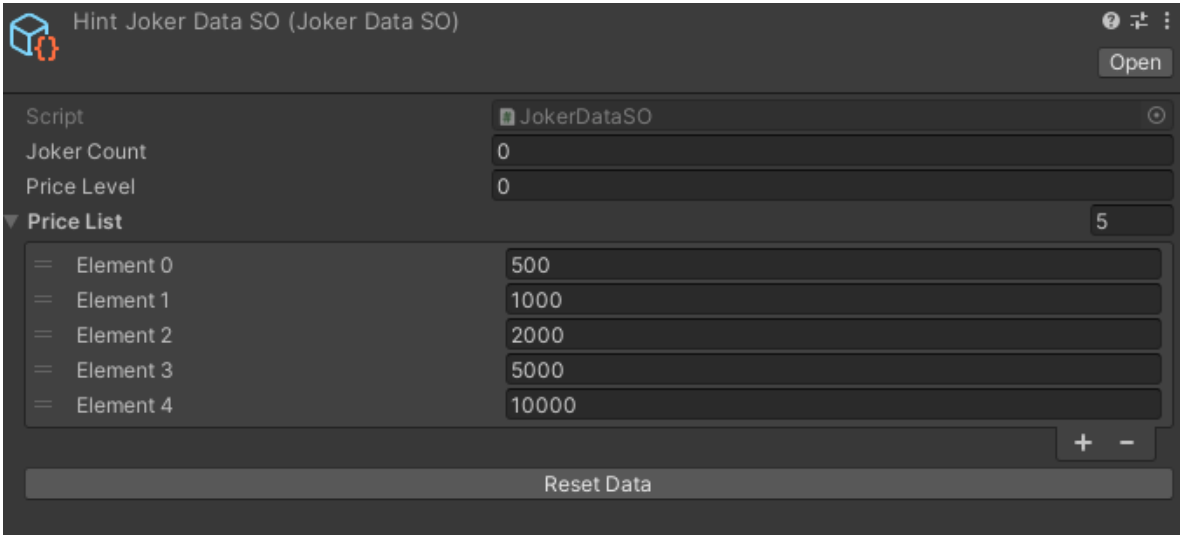

BackJokerDataSO

It is the joker that undoes the last move.

- Joker Count: Shows the available number of hint jokers. You can modify this value here.
- Price List: Shows the increasing cost for each Hint Joker purchase.

HintJokerDataSO

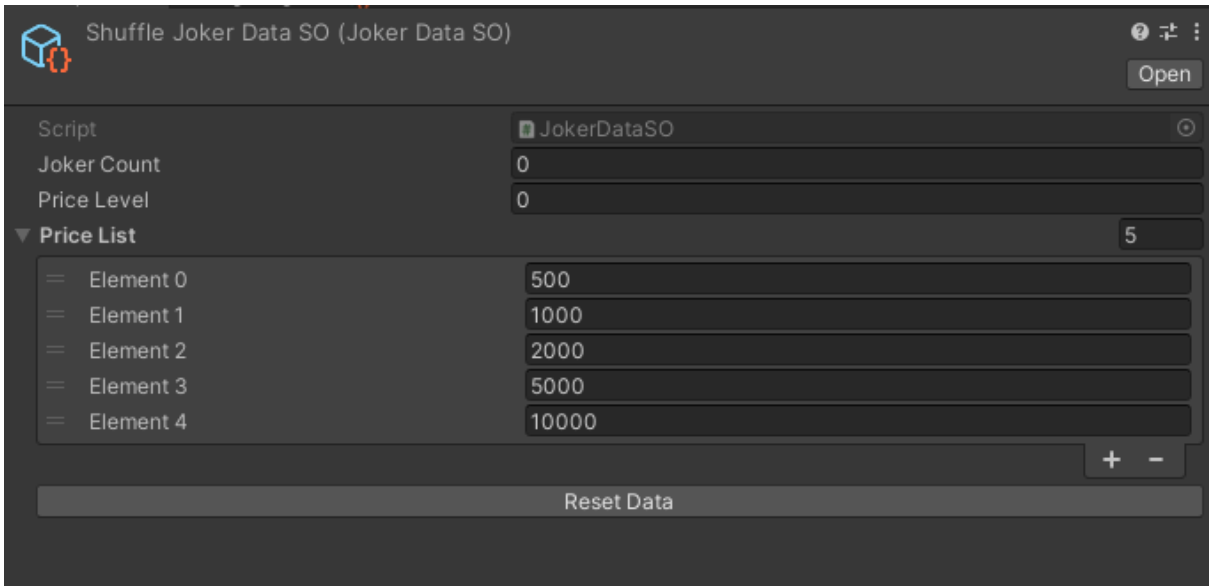

Automatically completes the first character in the queue.

- Joker Count: Shows the available number of hint jokers. You can modify this value here.
- Price List: Shows the increasing cost for each Hint Joker purchase.

ShuffleJokerDataSO

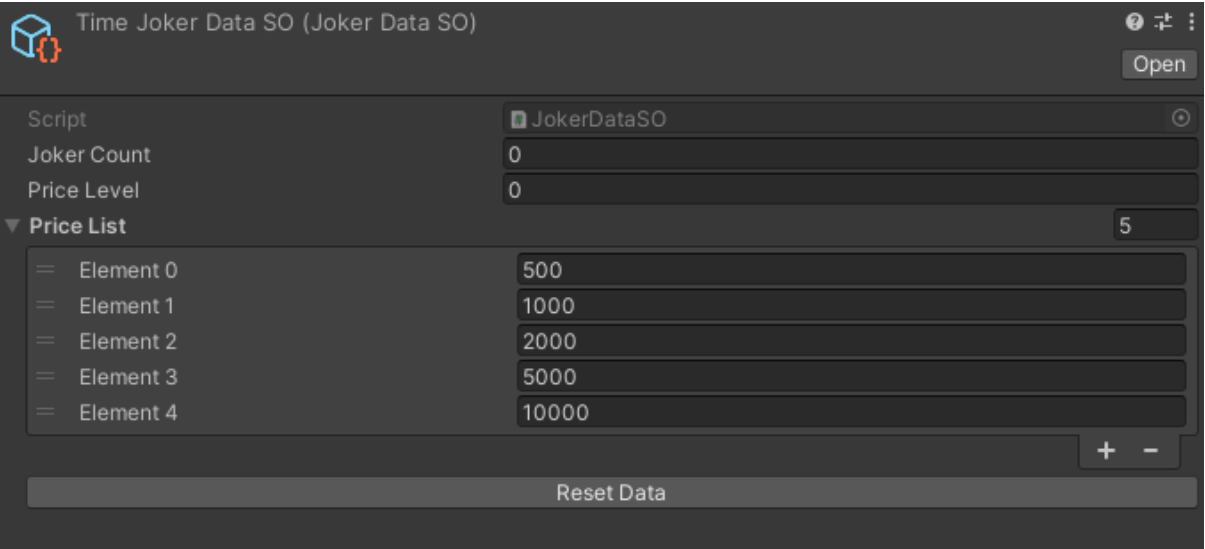

Shuffles the positions of the waiting characters in line.

- Joker Count: Shows the available number of hint jokers. You can modify this value here.
- Price List: Shows the increasing cost for each Hint Joker purchase.

TimeJokerDataSO

The time-freeze joker stops the baggage pickup belt.

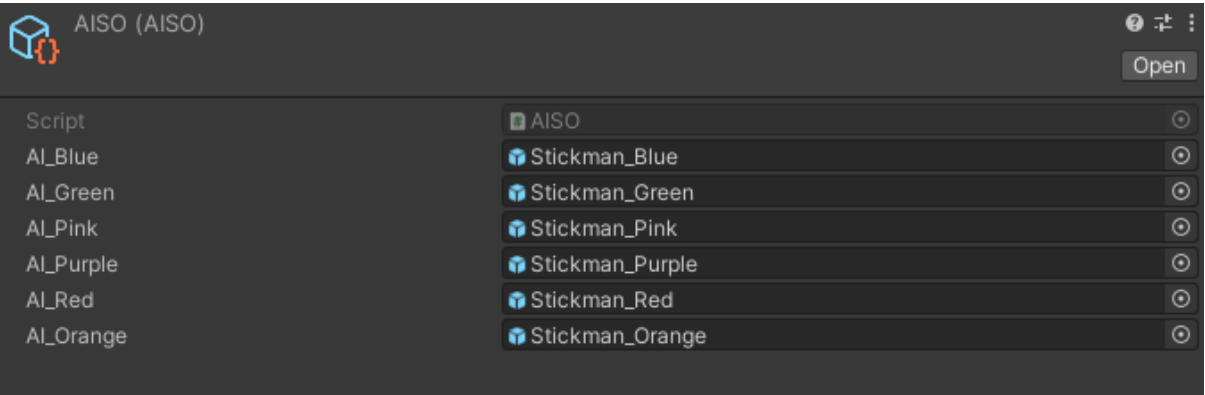

- Joker Count: Shows the available number of hint jokers. You can modify this value here.
- Price List: Shows the increasing cost for each Hint Joker purchase.

▼ Object Data

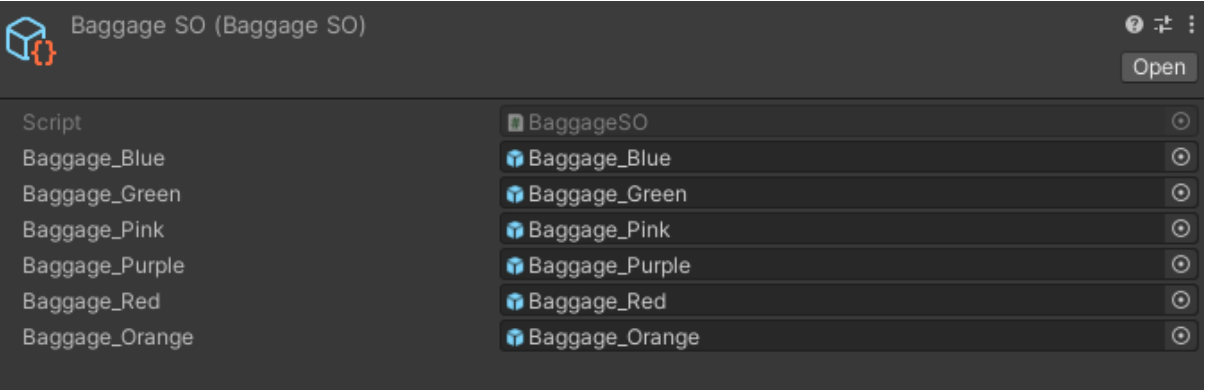

AISO

The place where character prefabs are stored. You can change them with different characters from here."

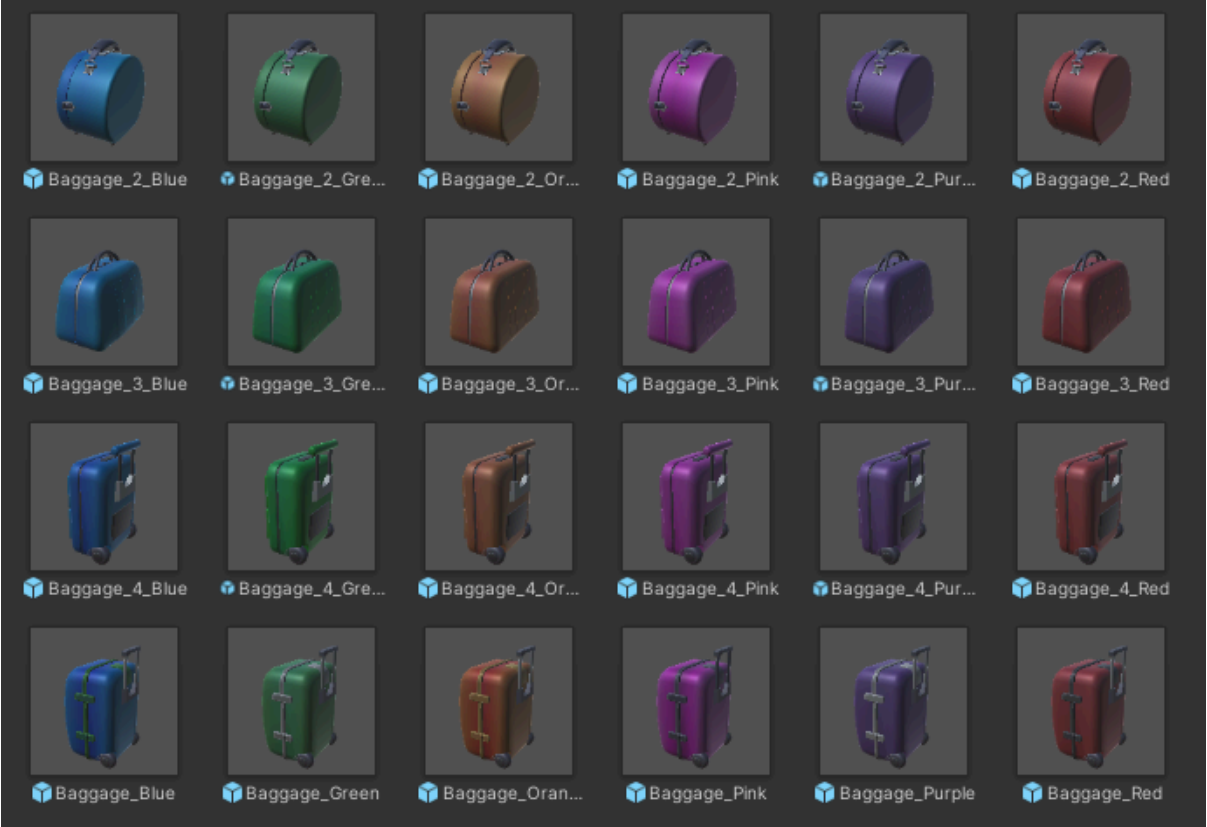

BaggageSO

You can change the baggage models from this list, considering their colors

The project already includes four different types of baggage prefabs that can be used. You can add them to the list to diversify the game.

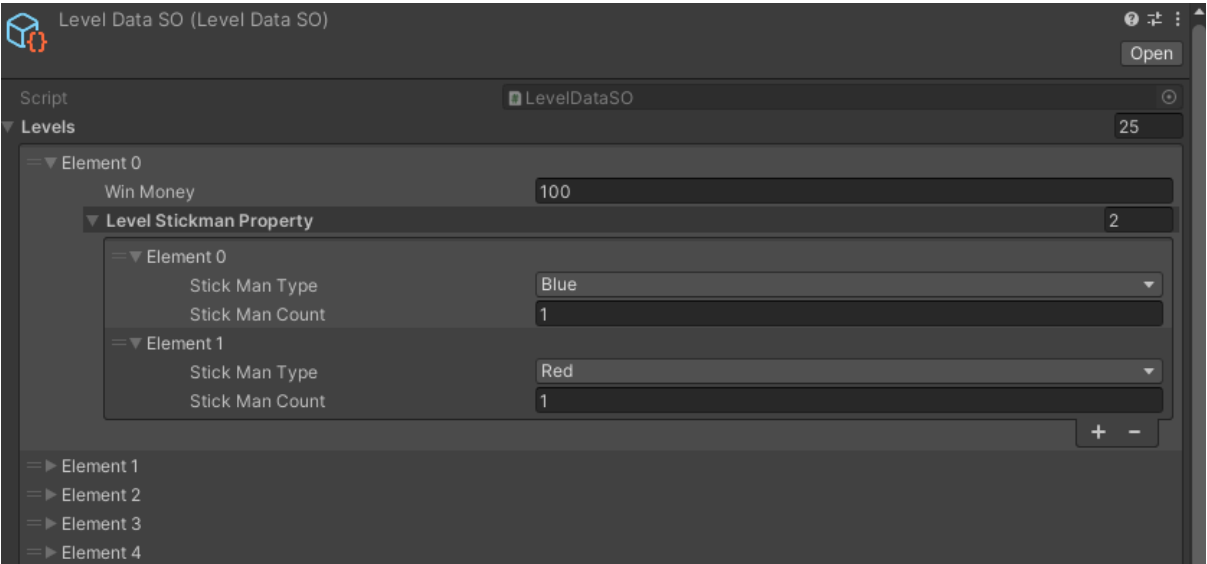

Assets\BaggageJam_Files\Game\Prefabs\Baggages

▼ **Level Data**

LevelDataSO

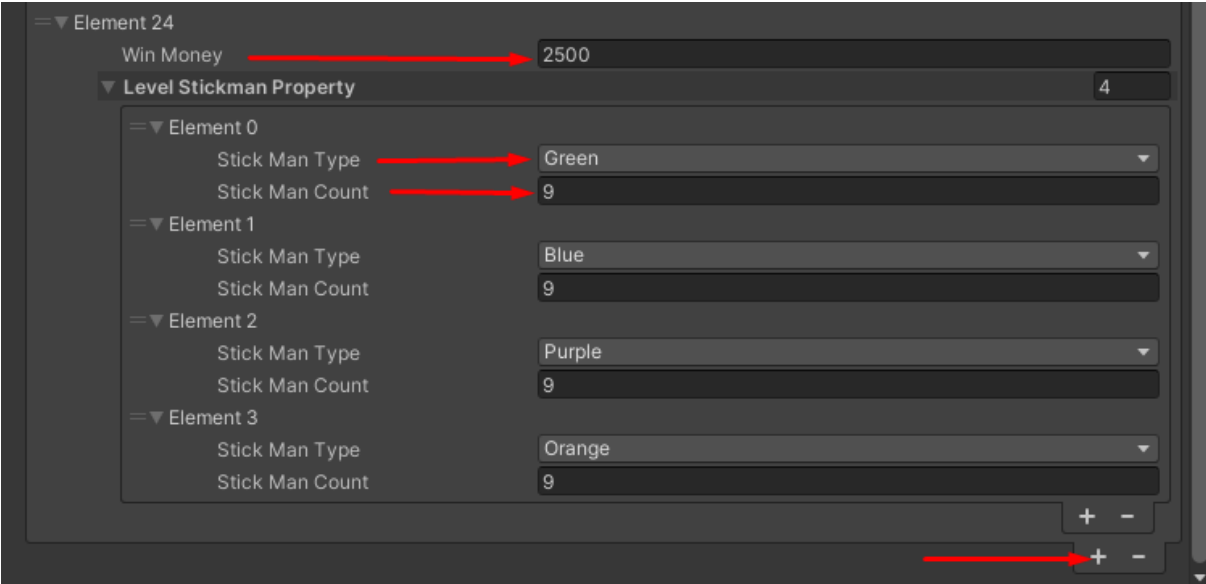

The place where you can edit the level list and add new levels.

The game currently has 24 different levels. After completing all 24 levels, it randomly selects from the existing ones to maintain continuity.

Create New Level

Here's a step-by-step explanation of how to create a new level based on the given image:

How to Create a New Level:

- 1. Add a New Level Element**
 - Create a new **Element (e.g., Element 24)** in the level list.
 - Set the **Win Money** value, which determines the reward for completing the level.
- 2. Define the Number of Stickman Types**
 - Adjust the number of different **Stickman Types** for this level.
 - This defines how many different stickman colors will appear.
- 3. Configure Each Stickman Type**
 - For each **Element (0, 1, 2, etc.)**, set:
 - **Stick Man Type:** Choose the color of the stickman (e.g., Green, Blue, Purple, Orange).
 - **Stick Man Count:** Define how many stickmen of this type will appear in the level.
- 4. Finalize and Save the Level**
 - After configuring the stickman types and counts, save the changes.
 - The new level is now ready to be used in the game.

This system allows for flexible level creation by modifying the number, color, and count of stickmen while adjusting the reward value. 🚀

▼ Particle Data

You can change the baggage merge particle effect.

By default, the *"ExplosionMatch"* particle is used.
